The nucleotide sequences from the present invention can also be used for detecting a predisposition to, differentiation between subclasses, diagnosis, prognosis, treatment and/or monitoring of haematopoietic cell proliferative disorders. The present method enables highly specific classification of haematopoietic cell proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      which distinguishes between methylated and non-methylated CpG dinucleotides within the target nucleic acid. ABZ09861 to ABZ1118 represent specifically claimed nucleic sequences from the present invention. Oligonucleotides from the present invention can be used: for differentiating between healthy haematopoietic cells and proliferative disorder haematopoietic cells; for differentiating between acute

                                                                                                                                                                                                                                                                                                                                   The invention relates to novel genes (AAH68727-AAH73383) associated with cervical cancer with cytostatic activity. The nucleic acids and encoded polypeptides are useful: to assess if a patient is afflicted with cervical cancer or has a pre-malignant condition; to monitor the progression of cervical cancer or a premalignant condition in a patient; and to select and/or assess the efficacy of a compound or therapy for inhibiting cervical cancer in a patient. The nucleic acids may also be useful for gene therapy
                                                                                                                                                                                                                                                                                                               Sequence 612 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WO200142467-A2

Olek A,
                                                                                                                                                                                                                                                                                                          determining the cytosine methylation state and/or single nucleotide polymorphisms (SNPs) of haematopoietic cell proliferation disorder related sequences and their complements; and as primers for the amplification of haematopoietic cell proliferation disorder related DNA sequences. The nucleotide sequences from the present invention can also be used for detecting a predisposition to, differentiation between subclasses, diagnosis, prognosis, treatment and/or monitoring of haematopoietic cell proliferative disorders. The present method enables highly specific classification of haematopoietic cell proliferative disorders allowing for improved and informed treatment of patients
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    represent specifically claimed nucleotide sequences from the present invention. Oligonucleotides from the present invention can be used: for differentiating between healthy haematopoietic cells and proliferative disorder haematopoietic cells; for differentiating between acute lymphocytic leukaemia and acute myelogenous leukaemia; as probes for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         differentiating between haematopoietic cell proliferative disorders associated with at least 1 gene and/or their regulatory regions in a subject. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least 1 reagent, which distinguishes between methylated and non-methylated CpG dinucleotides within the target nucleic acid.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC molecular tags to isolate genetic regions, to isolate genes, to make the comparison of the control of the control of genes, to determine gene function and to determining whether genes are commenders of a particular gene family. The nucleic acid molecules may be used for isolating a variety of agronomically significant genes are compared with plant growth, quality, yield, and could also serve as colinks in metabolic and catabolic pathways. The nucleic acid molecules are collinks in metabolic pathways. The nucleic acid molecules are collinks in metabolic pathways. The nucleic acid molecules are collinks in metabolic pathways. The nucleic acid molecules are collinks in metabolic pathways. The nucleic acid molecules are colling seed germination or that may be used to mitigate stresses encountered colling seed germination. The ESTs additionally enable the acquisition of commoters and cis-regulatory elements which will be useful to express and also genetic and molecular mapping, and in cloning of agronomically schemes, genetic and molecular mapping, and in cloning of agronomically colling significant genes. The nucleic acid molecular are further useful for colling the expression level or pattern of a protein or mRNA and for colling the expression level or pattern of a protein or mRNA and for control variety Nucotton338 androceium tissue cDNA library (LIB3828). The sequence data for this patent did not form part of the printed control of the printed sequence as a specification in the printed secular sequence as a specification format directly from the US protein format directly from the US protein sequence as a specification in the printed sequence as a specification in the pri

The invention also relates to substantially purified proteins or their fragments encoded by nucleic acid molecules of the invention, and to transformed plants having a nucleic acid construct comprising a nucleic acid of the invention. The cotton ESTs are useful molecular invention and to transformed plants having a nucleic acid construct comprising a nucleic acid of the invention. The cotton ESTs are useful molecular invention and to transformed plants having a nucleic acid construct comprising a nucleic acid of the invention. The cotton ESTs are useful molecular invention and to transformed plants having a nucleic acid of the invention.

                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cc which distinguishes between methylated and non-methylated CpG dinucleotides within the target nucleic acid. ABZ09861 to ABZ11118 cc represent specifically claimed nucleotide sequences from the present cinvention. Oligonucleotides from the present invention can be used: for differentiating between healthy haematopoietic cells and proliferative cd disorder haematopoietic cells; for differentiating between acute convention; the cytosine methylation state and/or single nucleotide convention; the cytosine methylation state and/or single nucleotide convention; the cytosine methylation state and/or single nucleotide convention of haematopoietic cell proliferation disorder crelated sequences and their complements; and as primers for the amplification of haematopoietic cell proliferation disorder related DNA sequences. The nucleotide sequences from the present invention can also be used for detecting a predisposition to, differentiation between subclasses, diagnosis, prognosis, treatment and/or monitoring of haematopoietic cell proliferative disorders. The present method enables a chighly specific classification of haematopoietic cell proliferative disorders allowing for improved and informed treatment of patients
                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

The invention relates to a nucleic acid comprising a sequence at least 18 CC bases in length of a segment of the chemically pretreated DNA of genes CC associated with pharmacogenomics according to one of the sequences of the genes ALDH6 (NM 00063), CYP1A1 (NM 000781), CYP1A1 (NM 000497), CYP3A3 (CC (NM 000776 and NM 017460), DPYD (NM 000110), EPHX2 (NM 001979), OCLN (CC (NM 001990, NM 019901, NM 019902, NM 019902, NM 019903, NM 019909) and CC their complementary sequences, or a sequence (S1) chosen from 87 CC sequences and their complements. The chemical pretreatment is bisulphite CC treatment to convert cytosines (but not methyl-cytosines) into uracils. CC peptide nucleic acid (PNA) -oligomer (II) in particular an oligonucleotide or a CC peptide nucleic acid (PNA) -oligomer, comprising in each case at least one base sequence having a length of 9 nucleotides which hybridises to or is concentrated with the methylation state (CC) analysing diseases associated with the methylation state (CC) analysing diseases associated with the methylation state (CC) analysing diseases associated with the methylation state (CC) and/or concentrated with the methylation state (CC) and/or state (CC) and (CC) an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; ds; bisulphite treatment; CpG; DNA methylation; cancer; tumour; cytostatic; ALDH6; CYP11A; CYP11B1; CYP3A3; DPYD; EPHX2; OCLN; TXNRD1; UGT8; MRP; pharmacogenomics; SNP; single nucleotide polymorphism.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           B
The invention relates to 17880 cotton expressed sequence tags (ESTs; CC ACN45220-ACN63099). The ESTs were isolated from cDNA libraries generated CC variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium CC vissue, developing fibres, carpel walls and septa from variety coker 312 Boswell 96 Field, and androecium tissue, gynoecium CC variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium CC invention3B. The invention also relates to substantially purified CC proteins or their fragments encoded by nucleic acid molecules of the CC invention, and to transformed plants having a nucleic acid construct comprising a nucleic acid of the invention. The cotton ESTs are useful as CC molecular tags to isolate genetic regions, to isolate genes, to metabolic cariety of agronomically significant genes are useful for isolating a variety of agronomically significant genes are classiciated with plant growth, quality, yield, and could also serve as clinks in metabolic and catabolic pathways. The nucleic acid molecules may be useful for identifying genes important in initiating and maintaining call germination or that may be used to mitigate stresses encountered conductors and cis-regulatory elements which will be useful to express conductally significant genes in these tissues and/or other tissues, genetic and molecular mapping, and in cloning of agronomically conductant genes. The nucleic acid molecules are further useful for detecting the expression level or pattern of a protein or manA and for CC detecting the presence or quantity of a protein by tissue printing. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          F
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated nucleic acid molecule that encodes a plant protein or its fragment, useful for isolating a variety of agronomically significant genes associated with plant growth, quality or yield, and as molecular

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cancer has metastatized in a patient; (f) assessing the aggressiveness or indolence of prostate cancer in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (I) is also useful as a pharmacodyanamic or pharmacogenomic marker

CC from primed or non-primed seeds from variety DPSOB, mature seeds from CC variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium CC variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium CC Nucotton33B. The invention also relates to substantially purified CC Nucotton33B. The invention also relates to substantially purified CC proteins or their fragments encoded by nucleic acid molecules of the CC comprising a nucleic acid of the invention. The cotton ESTs are useful as molecular tags to isolate genetic regions, to isolate genes, to map CC genes, to determine gene function and to determining whether genes are useful for isolating a variety of agronomically significant genes are CC also useful for identifying genes important in initiating and maintaining seed germination or that may be used to mitigate stresses encountered during seed germination. The ESTs additionally enable the acquisition of promoters and cis-regulatory elements which will be useful to express gronomically significant genes in these tissues and/or other tissues, capronomically significant genes in these tissues and/or other tissues, cc agronomically significant genes in these tissues and/or other tissues, cc and also permits the acquisition of molecular markers useful in breeding schemes, genetic and molecular mapping, and in cloning of agronomically contents the expression level or pattern of a protein or maNA and for detecting the expression level or pattern of a protein or maNA and for cotton variety DPSOB primed seed cnNA library (LIB3825). The sequence cotton variety DPSOB primed seed cnNA library (LIB3825). The sequence cotton variety DPSOB primed seed cnNA library (LIB3825). The sequence cotton variety DPSOB primed seed cnNA library (LIB3825). The sequence cotton variety DPSOB primed seed cnNA library (LIB3825). The sequence cotton variety DPSOB primed seed cnNA library (LIB3825). RESULT 11

differentiating between haematopoietic cell proliferative disorders considered with at least 1 gene and/or their regulatory regions in a considered with at least 1 gene and/or their regulatory regions in a considered with at least 1 gene and/or their regulatory regions in a considered with at least 1 gene and/or their regulatory regions in a considered with at least 1 reagent, considered distinguishes between methylated and non-methylated CPG which distinguishes between methylated and non-methylated CPG dinucleotides within the target nucleic acid. ABZ09861 to ABZ1118 converted invention. Oligonucleotides from the present from the present for convention of ligonucleotides from the present invention can be used: for convention the cytosine methylation for cells and proliferative disorder haematopoietic cells; for differentiating between acute convention to leukaemia; as probes for convention to leukaemia; as probes for convention of haematopoietic cell proliferation disorder related sequences and their complements; and as primers for the convention of haematopoietic cell proliferation disorder related DNA sequences. The nucleotide sequences from the present invention can also be used for detecting a predisposition to, differentiation between convention cell proliferative disorders. The present method enables a highly specific cels proliferative disorders. The present method enables a highly specific classification of haematopoietic cell proliferative disorders and informed treatment of patients.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cc modified using a solution of bisulphite, hydrogen sulphite or disulphite. Also disclosed are oligonucleotides and/or PNA oligomers for detecting ct he cytosine methylation state (CpG islands) of these genes, and a method cf or the diagnosis and/or therapy of genetic and epigenetic parameters of genes associated with signal transduction. The genomic DNA can be cobtained from cells or cellular components which contain DNA, e.g. cell clines, biopaies, blood, sputum, stool, urine, cerebral-spinal fluid, ctissue embedded in paraffin such as tissue from eyes, intestine, kidney, cc tissue embedded in paraffin such as tissue from eyes, intestine, kidney, cc tissue embedded in paraffin such as tissue from eyes, intestine, kidney, cc transuction, beart, prostate, lung, breast or liver, histologic object slides, and all their possible combinations. The sequences of the invention are useful for the diagnosis and therapy of diseases associated with signal transduction, or their complements before the sequence of the printed combination, but was obtained in electronic format directly from the sequences. Note: The sequences are considered with signal transduction, or their complementary sequences. Note: The sequence data for this patent did not form part of the printed sequences for the printed complements. The printed sequences are considered with signal transduction, or their complements of the printed sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches 162;

The activity of the modified sequences of the CC invention may be described as cytostatic. The object of the invention is to provide the chemically modified DNA of genes associated with cell comproved the chemically modified DNA of genes associated with cell comproved the chemically modified DNA of genes associated with cell comproved the control of the invention is comproved the control of the invention is set of genetic parameters of genes associated with cell signalling. The conditied DNA provided by the invention is useful for diagnosis chemically modified DNA provided by the invention is useful for diagnosis conditied in records ABL70111-ABL70626 represent chemically pre-treated conditions of genes associated with cell signalling. Note: The sequence data for this patent is not represented in the printed constitution of the condition of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches 162;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples and comparing the expression in the first soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 6816 BP;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Comprising a polynucleotide encoding a protein operably linked with a CC heterologous promoter sequence. The invention also concerns methods for CC providing gene therapy for genetic deficiency disorders. Vectors of the CC invention are useful for delivering a polynucleotide encoding a protein CC particle, or by transfection, transduction, or injection either in vitro CC or in vivo. The vector is useful for the vertebrate cell by infection in a viral CC particle, or by transfection, transduction, or injection either in vitro CC or in vivo. The vector is useful for the delivery and expression of CC biologically useful proteins in gene therapy protocols, and for CC delivering large DNA segments for engineering of vertebrate cells.

CC Polynucleotides of the invention have applications in techniques such as their use as insertion sites for foreign genes of interest, hybridisation CC production of sense or antisense nucleic acids. Vectors of the invention probes, for chromosome and gene mapping, in PCR technologies, and in the production of stable integration and expression of heterologous DNA in host cells, and are adapted for accepting large heterologous DNA in host cells, and are adapted for accepting large heterologous DNA in host called the control of the genus be delivered in an infected or transformed cell and ceragement of the genome of the genus B entomopoxvirus from amsacta moorei (AmEPV)

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Geoegawa and Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw ap, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Maron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPC1-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacac.med.htm.ffslc.adv/Arcsochila.bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACGAC Resource Center can be found at http://barnac.med.buffalo.

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC

library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CNS010MP 734 bp DNA linear GSS 26-JUL-19

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Oscegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BAGS. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp. the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC Clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be location/Qualifiers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazuttoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp. the same strain used for the BDGP's and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Le Paslier,M.C., Pierce,R.J., Merlin,F., Hirai,H., Wu,W., Williams,D.L., Johnston,D., LoVerde,P.T. and Le Paslier,D Construction and characterization of a Schistosoma manson bacterial artificial chromosome library Genomics 65 (2), 87-94 (2000)
                                                                                                                                                                                                           Web: www.genoscope.cns.fr)

Partially Hind III digested and size-selected S. mansoni cercarial DNA was ligated into Hind III digested pBeloBAC 11 vector and used to transform E. coli DHIOB. The complete library contains 23808 clones from 4 independent sizing-ligation-transformations. Average insert size ranges from 70-127 kb and genome coverage is 7.9-fold.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Eukaryota; Metazoa; Platyhelminthes; Trematoda; Digenea; Strigeidida; Schistosomatoidea; Schistosomatidae; Schistosoma. 1 (bases 1 to 886)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Schistosoma mansoni
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Schistosoma mansoni
